

RVEA family / execution results

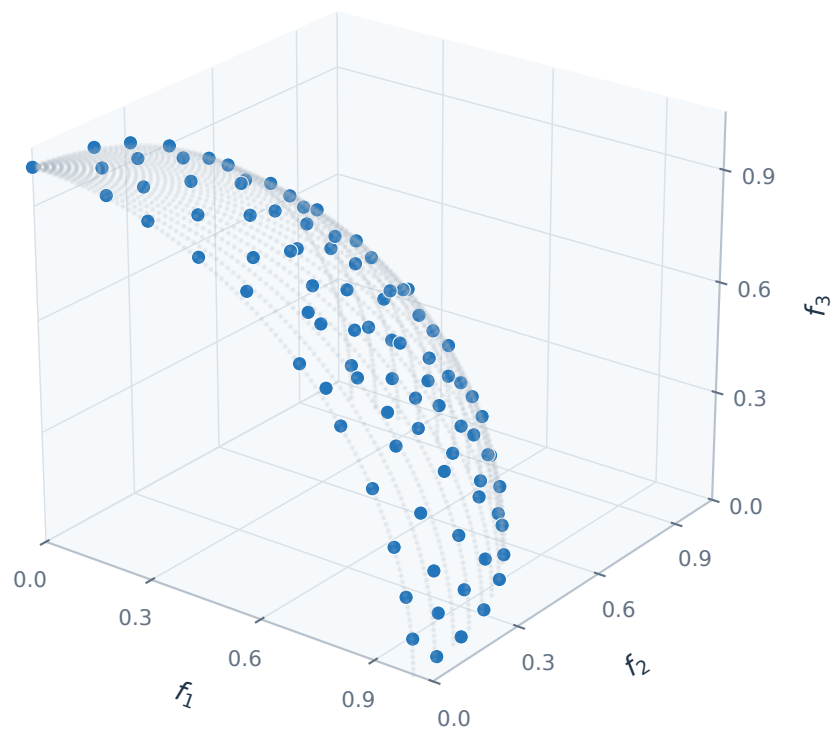

Five recorded runs on three-objective DTLZ problems. Lower IGD+ is better.

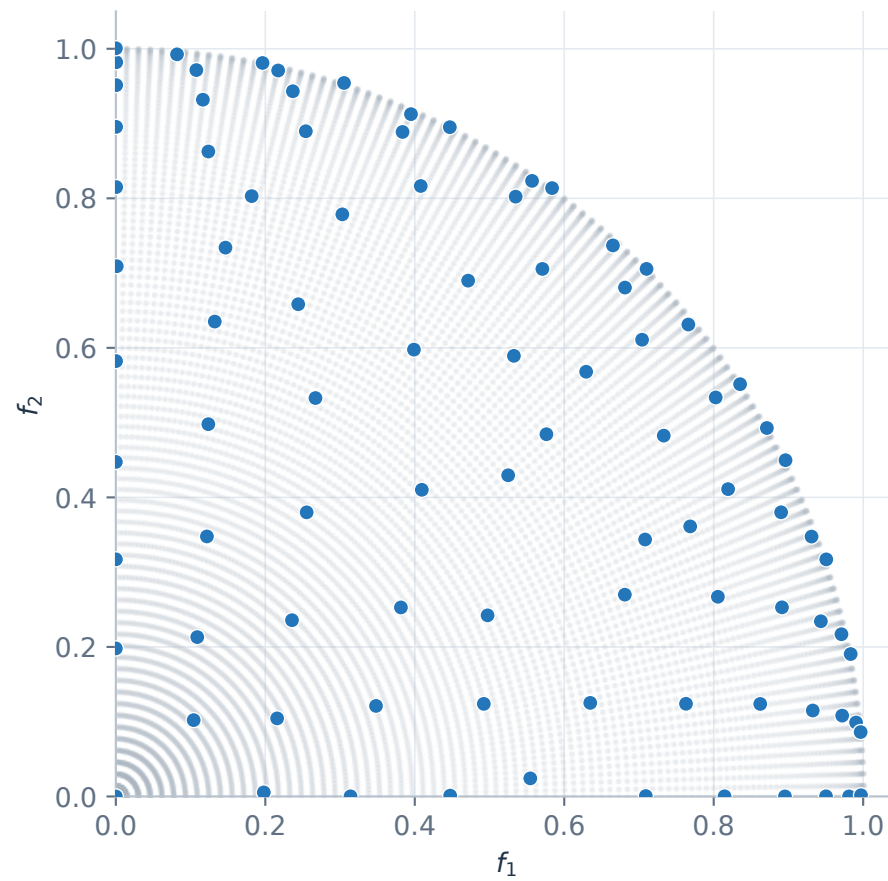

DTLZ2 / RVEA*

Regular front | 91 nondominated solutions | IGD+ 0.023796

Objective space

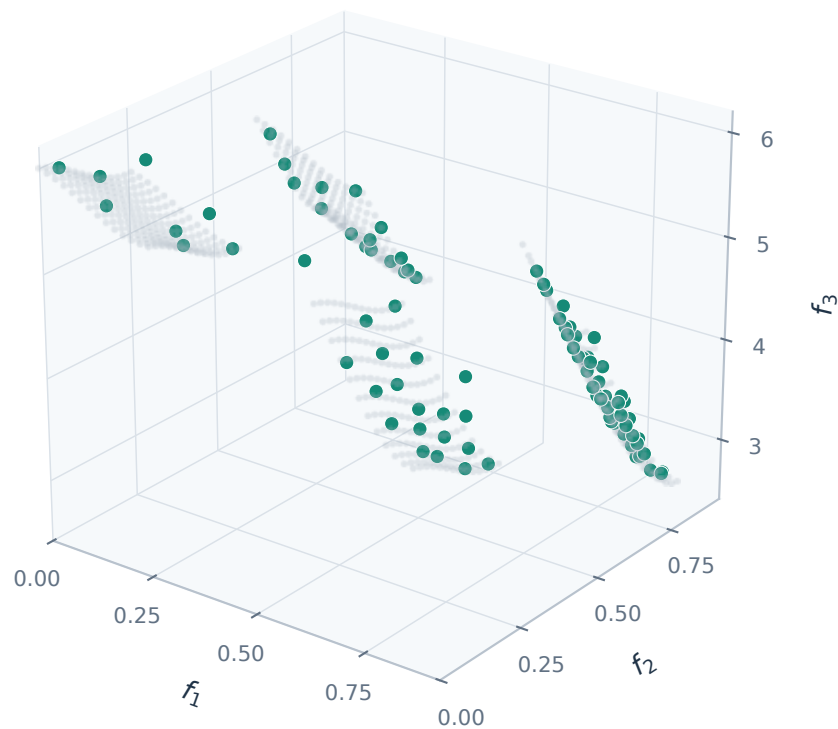

Projection onto f_1 and f_2

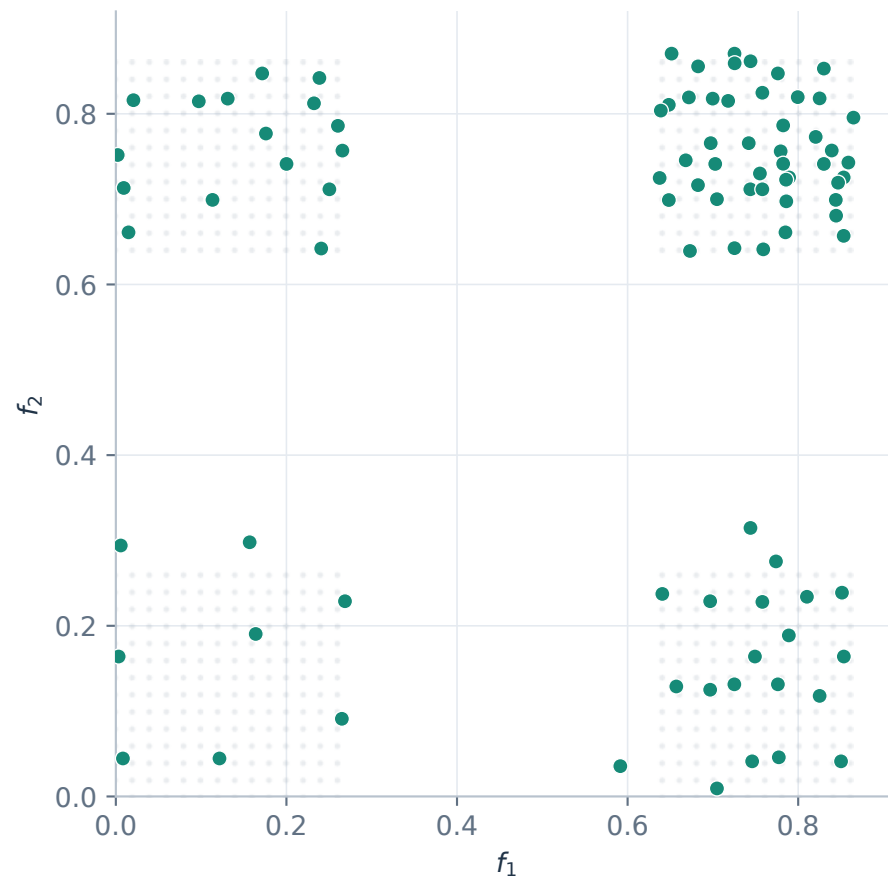

DTLZ7 / iRVEA

Disconnected front | 90 nondominated solutions | IGD+ 0.039189

Objective space

Projection onto f_1 and f_2

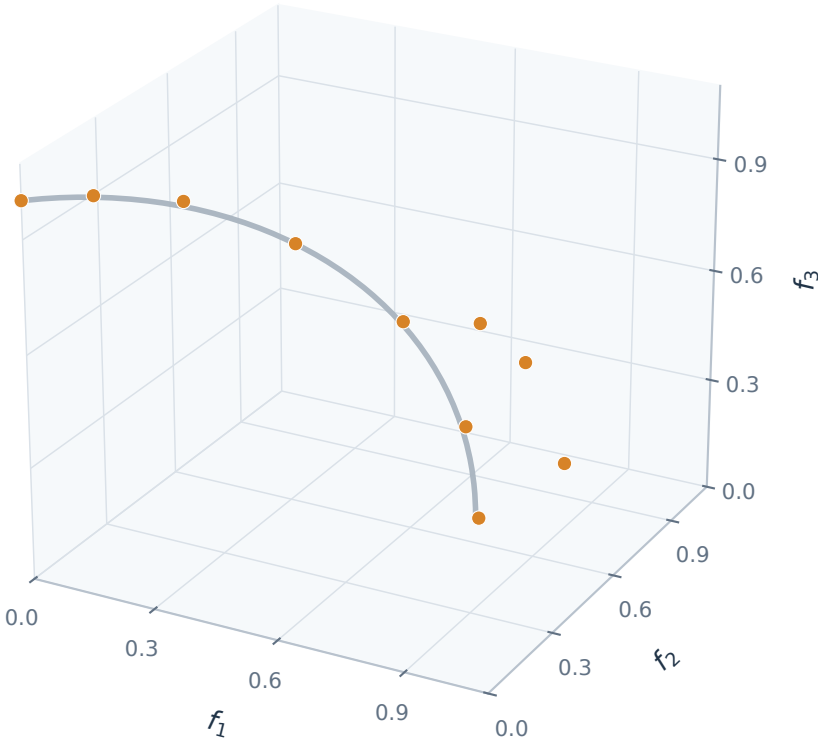

DTLZ5 / comparison on a degenerate front

Three objectives; the reference Pareto front is a curve. All panels share axis limits.

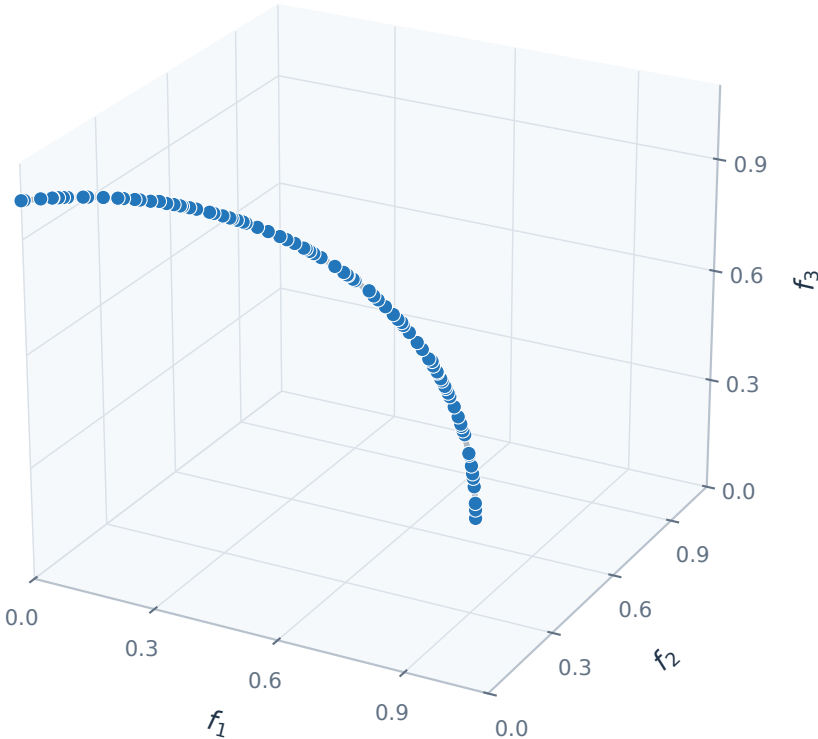

RVEA

10 nondominated points | IGD+ 0.036877

RVEA*

85 nondominated points | IGD+ 0.003019

iRVEA

90 nondominated points | IGD+ 0.002880
